	2.	Ci	tations and explanations (Rule 70.7):							
Box No. VII. Certain defects in the international application		se	ee separate sheet							
Box No. VII. Certain defects in the international application										
		P	ox No. \	/II Certain defects	in the in	ternationa	al application			

The following defects in the form or contents of the international application have been noted:

see separate sheet

1. Lack of unity

The application contains the following groups of inventions:

- claims 1-7, 10-21, 23-29: system for supplying refrigerated air to a freezer or refrigerator cabinet;
- claim 8: frost-free system with heating cable and water-collecting part;
- claims 9 and 22: freezer and/or refrigerator cabinet with grooves provided on the door, on an inner wall and/or on a floor ducting part for improving the airflow;
- claims 30 and 31: freezer and/or refrigerator cabinet with a door provided with a holder for an ice cube container.

These groups of invention are merely linked by the following features:

"A refrigerated air supply system comprising an evaporator, a return ducting part, a fan, an air supply outlet and an air supply inlet".

However, such a system is already known (see for instance US-A-4 840 037 (document D1): evaporator 23, return duct 25, fan 31, air supply outlet 29 and air supply inlet (not shown)).

Hence, there is no technical relationship among those inventions involving one or more of the same or corresponding special technical features in the sense of Rule 13.2 PCT.

The requirement of unity of invention referred to in Rule 13.1 PCT is therefore not fulfilled.

2. As regards novelty and inventive step:

2a. The subject-matter of claim 1 is known from US-A-4 840 037 (D1; see in particular figure 3 and the description, column 3, lines 35-68), from FR-A-2 205 653 (D2; see figure 1) as well as from DE-A-195 42 978 (D3; see abstract and figures 3,4).

D1, for instance, discloses a refrigerated air supply system comprising an evaporator (23), a return ducting part (25), a fan (31), an air supply outlet (29) and an air supply inlet (not shown).

Claim 1 therefore does not meet the requirements of Article 33(2) PCT.

- 2b. The additional features of dependent claims 2-7, 10-19, 28 and 29 are also known from D1, D2 and/or D3 (see search report), so that these claims too do not meet the requirements of Article 33(2) PCT.
- 2c. The additional features of dependent claims 20 and 21 are known from US-A-6 240 739 (D4; see in particular figures 1-3 and description, from column 5, line 4 to column 6, line 12).

The additional features of dependent claims 23-27 are known from US-A-5 826 437 (D5; see in particular figures 2 and 3, together with the description at column 2, lines 3-6 and 46-49, and column 3, lines 52-54).

The additional features of dependent claim 30 are known from EP-A-0 881 441 (D6; see in particular figure 13).

The additional features of dependent claim 31 are known from EP-A-0 374 021 (D7; see in particular the abstract and figure 3) or from FR-A-2 583 859 (D8; see page 2, lines 19-40 and figure 1).

The subject-matter of claims 20, 21, 23-27, 30 and 31 would therefore be rendered obvious by a combination of D1 with D4, D5, D6, D7 and/or D8.

Hence, claims 20, 21, 23-27, 30 and 31 do not to meet the requirements of Article 33(3) PCT.

3. Certain defects in the international application:

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/IB2004/002436

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in D1-D8 is not mentioned in the description, nor are these documents identified therein.
